Chapter 1

INFORMATION SYSTEMS IN BUSINESS TODAY

VIDEO CASES
Case 1: UPS Global Operations with the DIAD IV
Case 2: IBM, Cisco, Google: Global Warming by Computer
Learning Objectives

• Understanding the effects of information systems on business and their relationship to globalization.

• Explain why information systems are so essential in business today.

• Define an information system and describe its management, organization, and technology components.
Learning Objectives (cont.)

• Define complementary assets and explain how they ensure that information systems provide genuine value to an organization.

• Describe the different academic disciplines used to study information systems and explain how each contributes to our understanding of them.

• Explain what is meant by a sociotechnical systems perspective.
The New Yankee Stadium Looks to the Future

• **Problem:** Yankee fans choosing to watch games on TV or choose other forms of entertainment

• **Solutions:** Use information systems to enhance experience. Game coverage, statistics, delivered via ubiquitous HDTV monitors, mobiles can order concessions, view replays

• **Cisco Systems provides technology** to make Yankee Stadium the most wired in all of baseball

• Demonstrates IT’s role in providing new products and services.

• Illustrates the benefits of utilizing networks and mobile applications to enhance entertainment, information.
The Role of Information Systems in Business Today

• How information systems are transforming business
  – Increase in wireless technology use, Web sites
  – Increased business use of Web 2.0 technologies
  – Cloud computing, mobile digital platform allow more distributed work, decision-making, and collaboration

• Globalization opportunities
  – Internet has drastically reduced costs of operating on global scale
  – Presents both challenges and opportunities
Information technology capital investment, defined as hardware, software, and communications equipment, grew from 32 percent to 52 percent of all invested capital between 1980 and 2009.
• In the emerging, fully digital firm
  – Significant business relationships are digitally enabled and mediated
  – Core business processes are accomplished through digital networks
  – Key corporate assets are managed digitally
• Digital firms offer greater flexibility in organization and management
  – Time shifting, space shifting
Read the Interactive Session and discuss the following questions:

- What are the advantages of using mobile handheld devices? What are the disadvantages?
- What features are needed in a mobile to make it a business solution?
- What business functions can be performed by using handhelds alone? How have other companies utilized handhelds?
The Role of Information Systems in Business Today

- Growing interdependence between ability to use information technology and ability to implement corporate strategies and achieve corporate goals.

- Business firms invest heavily in information systems to achieve six strategic business objectives:
  1. Operational excellence
  2. New products, services, and business models
  3. Customer and supplier intimacy
  4. Improved decision making
  5. Competitive advantage
  6. Survival
• Operational excellence:
  – Improvement of efficiency to attain higher profitability
  – Information systems, technology an important tool in achieving greater efficiency and productivity
  – Walmart’s RetailLink system links suppliers to stores for superior replenishment system
The Role of Information Systems in Business Today

• New products, services, and business models:
  – Business model: describes how company produces, delivers, and sells product or service to create wealth
  – Information systems and technology a major enabling tool for new products, services, business models
    • Examples: Apple’s iPod, iTunes, iPhone, iPad, Google’s Android OS, and Netflix
Management Information Systems
CHAPTER 1: INFORMATION IN BUSINESS SYSTEMS TODAY

The Role of Information Systems in Business Today

• Customer and supplier intimacy:
  – Serving customers well leads to customers returning, which raises revenues and profits
    • Example: High-end hotels that use computers to track customer preferences and use to monitor and customize environment
  – Intimacy with suppliers allows them to provide vital inputs, which lowers costs
    • Example: J.C. Penney’s information system which links sales records to contract manufacturer
• Improved decision making
  – Without accurate information:
    • Managers must use forecasts, best guesses, luck
    • Leads to:
      – Overproduction, underproduction of goods and services
      – Misallocation of resources
      – Poor response times
    • Poor outcomes raise costs, lose customers
  – Example: Verizon’s Web-based digital dashboard to provide managers with real-time data on customer complaints, network performance, line outages, etc.
The Role of Information Systems in Business Today

• **Operational excellence:**
  – Improvement of efficiency to attain higher profitability

• **New products, services, and business models:**
  – Enabled by technology

• **Customer and supplier intimacy:**
  – Serving customers raises revenues and profits
  – Better communication with suppliers lowers costs

• **Improved decision making**
  – More accurate data leads to better decisions
• Competitive advantage
  – Delivering better performance
  – Charging less for superior products
  – Responding to customers and suppliers in real time
  – Examples: Apple, Walmart, UPS
The Role of Information Systems in Business Today

• Survival
  – Information technologies as necessity of business
  – May be:
    • Industry-level changes, e.g. Citibank’s introduction of ATMs
    • Governmental regulations requiring record-keeping
      – Examples: Toxic Substances Control Act, Sarbanes-Oxley Act
The Role of Information Systems in Business Today

The Interdependence Between Organizations and Information Technology

Figure 1.2 In contemporary systems there is a growing interdependence between a firm’s information systems and its business capabilities. Changes in strategy, rules, and business processes increasingly require changes in hardware, software, databases, and telecommunications. Often, what the organization would like to do depends on what its systems will permit it to do.
Management Information Systems

CHAPTER 1: INFORMATION IN BUSINESS SYSTEMS TODAY

 Perspectives on Information Systems

• Information system:
  – Set of interrelated components
  – Collect, process, store, and distribute information
  – Support decision making, coordination, and control

• Information vs. data
  – Data are streams of raw facts
  – Information is data shaped into meaningful form
Raw data from a supermarket checkout counter can be processed and organized to produce meaningful information, such as the total unit sales of dish detergent or the total sales revenue from dish detergent for a specific store or sales territory.
Three activities of information systems produce information organizations need

1. **Input**: Captures raw data from organization or external environment
2. **Processing**: Converts raw data into meaningful form
3. **Output**: Transfers processed information to people or activities that use it
• Feedback:
  – Output returned to appropriate members of organization to help evaluate or correct input stage

• Computer/Computer program vs. information system
  – Computers and software are technical foundation and tools, similar to the material and tools used to build a house
Functions of an Information System

An information system contains information about an organization and its surrounding environment. Three basic activities—input, processing, and output—produce the information organizations need. Feedback is output returned to appropriate people or activities in the organization to evaluate and refine the input. Environmental actors, such as customers, suppliers, competitors, stockholders, and regulatory agencies, interact with the organization and its information systems.

Figure 1.4
Information Systems
Are More Than Computers

Using information systems effectively requires an understanding of the organization, management, and information technology shaping the systems. An information system creates value for the firm as an organizational and management solution to challenges posed by the environment.

Figure 1.5
• Organizational dimension of information systems
  – Hierarchy of authority, responsibility
    • Senior management
    • Middle management
    • Operational management
    • Knowledge workers
    • Data workers
    • Production or service workers
Levels in a Firm

Business organizations are hierarchies consisting of three principal levels: senior management, middle management, and operational management. Information systems serve each of these levels. Scientists and knowledge workers often work with middle management.

Figure 1.6
Organizational dimension of information systems (cont.)

- Separation of business functions
  - Sales and marketing
  - Human resources
  - Finance and accounting
  - Manufacturing and production

- Unique business processes
- Unique business culture
- Organizational politics
Management dimension of information systems

- Managers set organizational strategy for responding to business challenges
- In addition, managers must act creatively:
  - Creation of new products and services
  - Occasionally re-creating the organization
• Technology dimension of information systems
  – Computer hardware and software
  – Data management technology
  – Networking and telecommunications technology
    • Networks, the Internet, intranets and extranets, World Wide Web
  – IT infrastructure: provides platform that system is built on
Read the Interactive Session and discuss the following questions:

• What are the inputs, processing, and outputs of UPS’s package tracking system?

• What technologies are used by UPS? How are these technologies related to UPS’s business strategy?

• What problems do UPS’s information systems solve? What would happen if these systems were not available?
• Dimensions of UPS tracking system
  – Organizational:
    • Procedures for tracking packages and managing inventory and provide information
  – Management:
    • Monitor service levels and costs
  – Technology:
    • Handheld computers, bar-code scanners, networks, desktop computers, etc.
Perspectives on Information Systems

• Business perspective on information systems:
  – Information system is instrument for creating value
  – Investments in information technology will result in superior returns:
    • Productivity increases
    • Revenue increases
    • Superior long-term strategic positioning
• **Business information value chain**
  – Raw data acquired and transformed through stages that add value to that information
  – Value of information system determined in part by extent to which it leads to better decisions, greater efficiency, and higher profits

• **Business perspective:**
  – Calls attention to organizational and managerial nature of information systems
From a business perspective, information systems are part of a series of value-adding activities for acquiring, transforming, and distributing information that managers can use to improve decision making, enhance organizational performance, and, ultimately, increase firm profitability.
Variation in Returns On Information Technology Investment

Although, on average, investments in information technology produce returns far above those returned by other investments, there is considerable variation across firms.

Figure 1.8
Investing in information technology does not guarantee good returns.

Considerable variation in the returns firms receive from systems investments.

Factors:
- Adopting the right business model
- Investing in complementary assets (organizational and management capital)
• Complementary assets:
  – Assets required to derive value from a primary investment
  – Firms supporting technology investments with investment in complementary assets receive superior returns
  – E.g.: invest in technology and the people to make it work properly
Complementary assets include:

- **Organizational assets, e.g.**
  - Appropriate business model
  - Efficient business processes

- **Managerial assets, e.g.**
  - Incentives for management innovation
  - Teamwork and collaborative work environments

- **Social assets, e.g.**
  - The Internet and telecommunications infrastructure
  - Technology standards
Contemporary Approaches to Information Systems

The study of information systems deals with issues and insights contributed from technical and behavioral disciplines.

Figure 1.9
Contemporary Approaches to Information Systems

• Technical approach
  – Emphasizes mathematically based models
  – Computer science, management science, operations research

• Behavioral approach
  – Behavioral issues (strategic business integration, implementation, etc.)
  – Psychology, economics, sociology
Management Information Systems

CHAPTER 1: INFORMATION IN BUSINESS SYSTEMS TODAY

Contemporary Approaches to Information Systems

• Management Information Systems
  – Combines computer science, management science, operations research and practical orientation with behavioral issues

• Four main actors
  – Suppliers of hardware and software
  – Business firms
  – Managers and employees
  – Firm’s environment (legal, social, cultural context)
• Approach of this book: Sociotechnical view

• Optimal organizational performance achieved by jointly optimizing both social and technical systems used in production

• Helps avoid purely technological approach
In a sociotechnical perspective, the performance of a system is optimized when both the technology and the organization mutually adjust to one another until a satisfactory fit is obtained.
